

**1. Site Navigation (30): Home, Favorite Links, Resume, “Other”, Feedback**

- 5 working links throughout the site’s pages; remove each page’s own link to itself (but leave the text)

**2. Content & Coding for Old Pages (30): Resume, Fave Links, Feedback, & Response**

- Styled like rest of site, Resume page has no info from original video (all your own info), Fave links are all your own, feedback pages have updated select list, fieldset bg color, & feedback & response images

**3. New Page Content for the Home Page & the “Other” Page**

All pages' text content must take up at least most of the available 1920x1080 space in browser window.

**a) Home page: (25)**

- Create a **paragraph introducing you** and your site (several sentences).
- This page should also include an **ordered list of interests or hobbies or activities** you like
- An **unordered list of short personal trivia items** (such as "I'm obsessed with American Idol"),
- Small **picture of yourself or of a role model** of yours or someone you admire...
- Along with a **paragraph about that picture** and why you chose it.
- You can also insert a 2nd image, but these images must be small and not dominate the page

**b) “Other” page: (25)**

- Page should contain truthful, **original personal info about a topic – not general info about it.**
- Must have an image, but page must be mostly text (fill up the page). Explain images with text.

**4. Create Your own LOGO (25)**

- There are some links to logo creation sites in Canvas' Recommended Final Project Resources area.
- The logo must include the text "Firstname Lastname's World" where you substitute your own actual first and last name, and you may choose to substitute another word (or 2 or 3) for "world".
- The logo can have other artwork, photo(s), background, texture, etc.
- The logo should be placed at the top of all pages in the site's “header” area, using an <img> tag.
- Your logo image and all other images, should contain descriptive "alt text" in the HTML img tags.

**5. CSS Styles for Your Site (30)**

- Create a **separate “.css” file** and then create a “link” to that file in the "head" section of all pages
- Create a consistent **site wide color scheme** (backgrounds & text colors) that goes with your logo.
- Create appropriate **nav bar link styles** – there should be some changes when the mouse moves over them in browser. Use such selectors as **a:hover** and **a:visited** to do this. Links should be easy to read.
- Create separate **font-family & color** settings for "body" text & heading text (using proper font lists)
- All formatting should be done with CSS styles inside this separate .css style sheet file
- Validate your CSS styles using a CSS code validator like the one at W3C.

**6. Testing Your Final Project Site (35)**

- Site looks good, works well, fills up a Chrome window at 1920x1080 using normal image / font sizes
- All HTML5 and CSS code validates on all pages with no missing closing tags (errors = deductions)
- Spell-check the text on your pages, no generic text left over on pages – add your own footer text

**7. Extra credit (max of 15 pts)**

1. Create another page called “My Goals”, add a link to this page in the navigation on all pages
2. Add subheadings & text for “Educational Goals”, “Career Goals”, and “Personal Goals”
3. Page should look and format like all other pages (using the same CSS as other pages)
